About Me

Hi! I'm Rubén Sardón, an adept problem solver procuring my spot in the video game industry. I'm a full-on Bartle explorer aiming to delve into workflows and pipelines miscellanea. Although I enjoy submerging myself into new paradigms, my main fields of expertise revolve around **C++**, **engines** and **graphics**.

Dec 1995

Barcelona, Spain

Work Experience

Unity Programmer, Freelance 2022 – Present

Worked on two gymkhana-type apps made with Unity that used geolocation making players explore their surroundings whilst facing a range of mini-games spread throughout. My services included:

- Estimating, composing and presenting scalable budgets.
- Designing and implementing:
 - Merged layouts supporting both deployments on a single Unity project.
 - Scalable database for:
 - Modifying game content without having to install a new version.
 - Saving and comparing playthroughs (rankings).
 - KPI analysis automation.
 - Multi-threaded database content acquisition.
 - New and different game mode.
 - User interface animations.
 - Testing panels and tools.
 - Minigames' abstraction optimizing future implementations.
- Removing dependencies from previously used external assets.
- Enhancing acquisition of geolocation information for increased reliability.
- Implementing new minigames based on supplied sketches.
